Sid: I think you are right on point; the reach of this ACUS project is very wide.

Taken literally, a “Rule on Rulemakings” can be taken as an algorithm which translates individual regulatory transactions into a macro control mechanism. I am following this project because I think it can generate a considerable repository of knowledge to assist us in this project which we have underway, please see <https://www.thecre.com/forum8/?p=5248>
